— FOG ALARM ANNUNCIATOR

FOG Alarm Annunciator

DEN-VA1A

Premium Grade 3 fog security MP3 annunciator is a voice broadcast device designed to play pre-recorded audio messages alongside a security fog systems deployment.

It serves to legally warn occupants, guide panicked bystanders, and act as an intense audio deterrent to intruders.

KEY FUNCTIONS AND PURPOSE

Legal Compliance:

In many regions, European Guidelines and UK insurance regulations recommend or require a voice announcer.

It informs anyone inside that the dense fog is safe and non-toxic.

Panic Prevention: A sudden fog deployment drops visibility to zero in seconds.

The annunciator guides people by stating a standard reassurance message.
